

CLAIMS

The invention claimed is:

The invention claimed is:

1. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:
a first medication delivery means; and
a second medication delivery means;
wherein the said first medication delivery means is connected or affixed by connection means to the said second medication delivery means.
2. A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:
a first medication delivery means; and
a second medication delivery means;
wherein the said first medication delivery means is removeably connected or affixed by connection means to the said second medication delivery means.
3. The invention of Claim 1 in which:
the said first medication delivery means is a pill; and
the said second medication delivery means is a pill.

4. The invention of Claim 1 in which:
the said first medication delivery means is a pill; and
the said second medication delivery means is a capsule.
5. The invention of Claim 1 in which:
the said connection means is glue.
6. The invention of Claim 2 in which:
the said connection means is glue.
